

\$ git branch

\$ git logs

# GIT CHEAT SHEET

\$ git fetch

\$ git status

## SETUP & INIT

Configuring user information, initializing and cloning repositories.

### \$ git init

Initialize an existing directory as a Git repository.

## STAGE & SNAPSHOT

Working with snapshots and the Git staging area.

### \$ git status

Show modified files in working directory, staged for your next commit.

### \$ git clone [url]

Retrieve an entire repository from a hosted location via URL.

### \$ git add [file]

Add a file as it looks now to your next commit (stage).

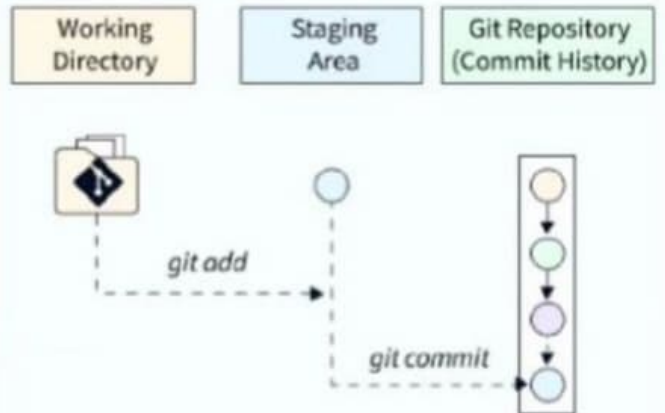

### \$ git reset [file]

Unstage a file while retaining the changes in working directory.

### \$ git commit -m "[descriptive message]"

Commit your staged content as a new commit snapshot.

### \$ git diff

Diff of what is changed but not staged

## BRANCH & MERGE

Isolating work in branches, changing context, and integrating changes.

### git diff --staged

Diff of what is staged but not yet committed.

### \$ git branch

List your branches. A \* will appear next to the currently active branch.

## \$ git branch [branch-name]

Create a new branch at the current commit.

## \$ git merge [branch]

Merge the specified branch's history into the current one.

## \$ git checkout

Switch to another branch and check it out into your working directory.

## \$ git log

Add a file as it looks now to your next commit (stage).

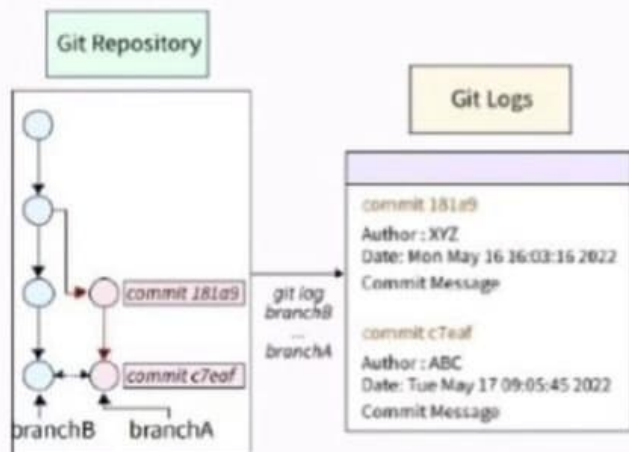

## INSPECT & COMPARE

Configuring user information,  
initializing and cloning repositories.

```
$ git log branchB..branchA
```

Show the commits on branchA that  
are not on branchB.

```
$ git diff branchB...branchA
```

Show the diff of what is in branchA  
that is not in branchB.

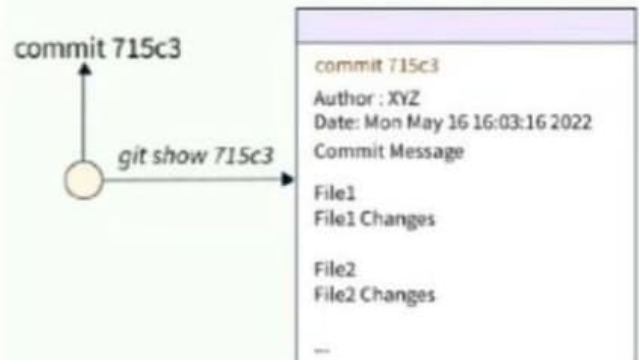

```
$ git log --follow [file]
```

Show the commits that changed file,  
even across renames.

```
$ git show [SHA]
```

Show any object in Git in  
human-readable format.

## TRACKING PATH CHANGES

Versioning file removes and path changes.

```
$ git rm [file]
```

Delete the file from the project and stage the removal for commit.

```
$ git log --stat -M
```

Show all commit logs with indication of any paths that moved.

## IGNORING PATTERNS

Preventing unintentional staging or committing of files.

```
logs/  
*.notes  
pattern*/
```

Save a file with desired patterns as `.gitignore` with either direct string matches or wildcard globs.

`.gitignore`

```
logs/  
*.notes  
pattern*/
```

```
$ git mv [existing-path] [new-path]
```

Change an existing file path and stage the move.

```
$ git config --global core.excludesfile [file]
```

System wide ignore pattern for all local repositories

## SHARE & UPDATE

Retrieving updates from another repository and updating local repos.

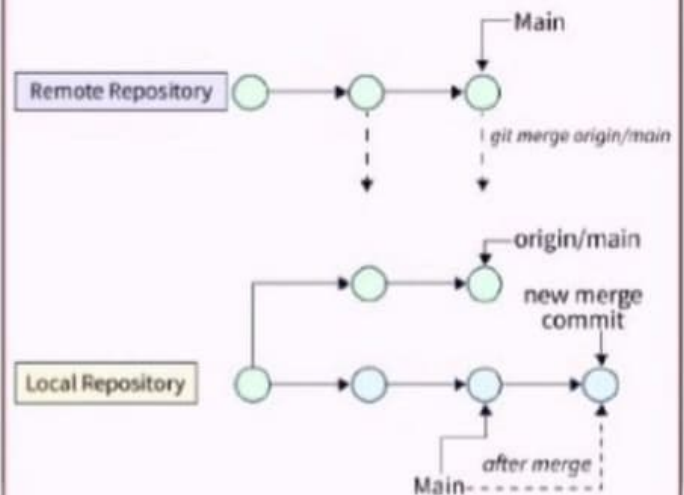

```
$ git remote add [alias] [url]
```

Add a git URL as an alias.

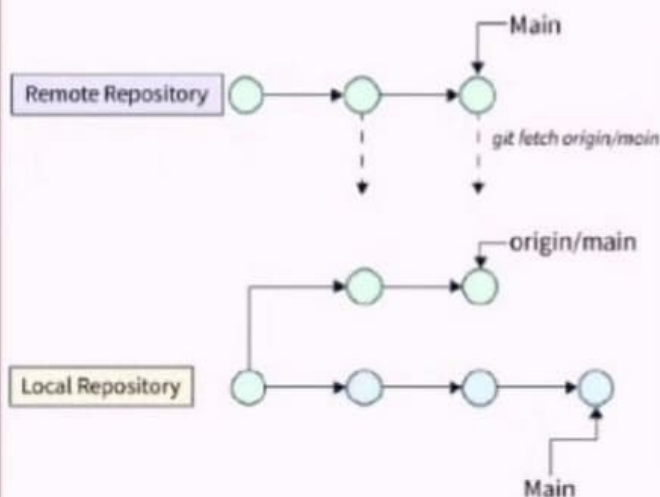

```
$ git merge [alias]/[branch]
```

Merge a remote branch into your current branch to bring it up to date.

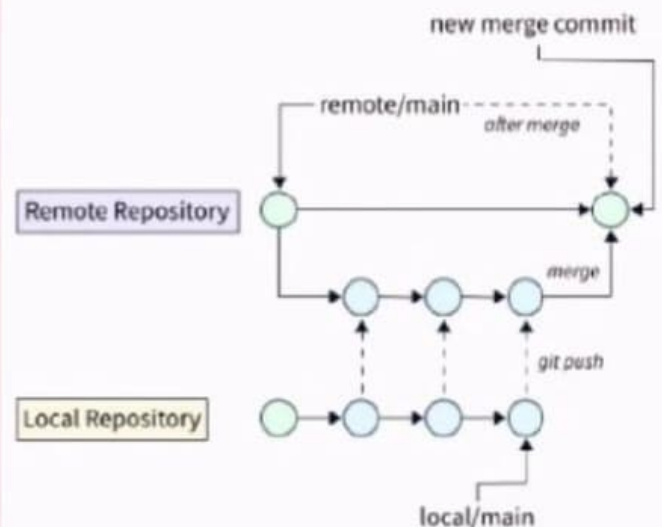

```
$ git fetch [alias]
```

Fetch down all the branches from that Git remote.

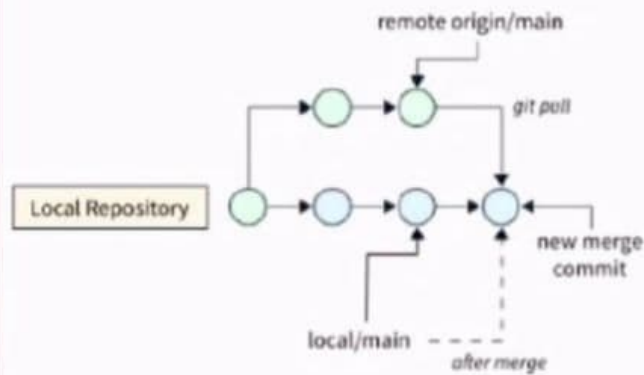

```
$ git push [alias] [branch]
```

Transmit local branch commits to the remote repository branch.

## \$ git pull

Fetch and merge any commits from the tracking remote branch.

## \$ git reset --hard [commit]

Clear staging area, rewrite working tree from specified commit.

## REWRITE HISTORY

Rewriting branches, updating commits and clearing history.

## TEMPORARY COMMITS

Temporarily store modified, tracked files in order to change branches.

## \$ git rebase [branch]

Apply any commits of the current branch ahead of specified one.

## \$ git stash

Save modified and staged changes.

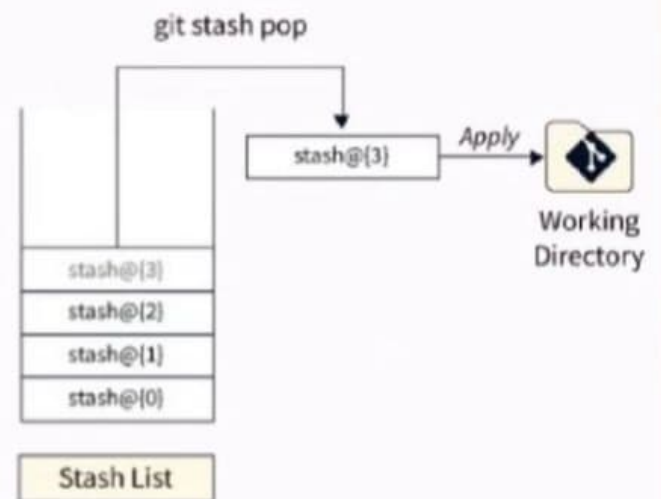

## \$ git stash list

List stack-order of stashed file changes.

## \$ git stash pop

Write working from the top of the stash stack.

## \$ git stash drop

Discard the changes from the top of the stash stack.
